SUMMARY

Principal DevOps/SRE Engineer and AI Engineer with 9+ years building and scaling cloud platforms for fintech, banking, media, and enterprise clients. Founded and led DevOps practices from zero at multiple organizations. Expert in Kubernetes, CI/CD automation, observability, and large-scale cloud migrations (on-prem → AWS/OCI). Currently driving AI integration into DevOps workflows at Oracle, building multi-agent systems for automated root cause analysis. Pursuing Master's in Artificial Intelligence.

TECHNICAL SKILLS

- **Programming:** Python, Go, Java, Shell, PL/SQL, NodeJS
 - **DevOps/SRE:** Jenkins, GitHub Actions, Docker, Kubernetes, Terraform, Ansible, Helm, Artifactory, SonarQube, Snyk
 - **AI/ML:** Scikit-learn, TensorFlow, MLflow, FastAPI, Pandas, NLP, LLMs, FastMCP
- **Cloud:** AWS (ECR, EKS, ECS, EC2, S3, RDS, Lambda, DynamoDB), OCI
 - **Observability:** Prometheus, OpenTelemetry, Dynatrace, Grafana, CloudWatch, Kibana
 - **Mobile CI/CD:** Fastlane (iOS/Android)

CERTIFICATIONS

Python Essentials for MLOps (Duke University) | OCI 2025 AI Foundations Associate | OCI 2025 Foundations Associate | OCI DevOps (In Progress)

EXPERIENCE

Principal DevOps Engineer — Oracle

Apr 2025 – Present

- Leading the modernization of legacy systems — migrating enterprise SCM from ClearCase to Git, developing custom APIs and a GUI frontend (Flet) to support the transition for internal teams
- Driving AI integration into DevOps workflows as part of Oracle's company-wide AI adoption initiative — directly aligned with Master's in AI Engineering
- Building a multi-agent RCA system (Orchestrator → Workers → Auditor) with Agent Gateway and MCP Gateway — targeting reduction of root cause analysis from ~3 hours to under 10 minutes across interconnected legacy systems
- Reduced CI/CD execution times by 35% through pipeline architecture redesign across 20+ services
- Implemented repository governance, branch strategy, and workflow automation using Visual Builder Studio

DevOps & L2 Support Engineer — Santander Bank USA

Feb 2024 – Apr 2025

- Provided L2 support and incident response across 20+ production services on AWS and on-prem infrastructure, operating within strict SLA targets
- Performed root-cause analysis using Dynatrace, Grafana, Kibana, CloudWatch, and Lambda to ensure system reliability
- Developed Python automation workflows for diagnostics, reducing manual troubleshooting effort

Head of DevOps / Middleware Dev Manager — Macropay

Jun 2022 – Oct 2023

- Built the entire DevOps practice from zero in a company with no prior DevOps culture — defined processes, tooling, and workflows collaborating with Architecture, Testing, PM, and Security teams
- Led the full on-premise to AWS migration: evaluated and selected deployment services (Lambda, ECS, EKS, EC2) per workload, built deployment automation with Python/Boto3, Terraform, and Jenkins — aligned with cybersecurity for sensitive data protection
- Created ephemeral development environments — brought AWS spend from 2x over budget down to 95% budget compliance, complemented with Reserved Instance allocations
- Trained developers and sysadmins on AWS, containers, and Kubernetes — successfully upskilled them into DevOps roles
- Led 15 engineers across DevOps and middleware development, scaling workflows for 30+ microservices; designed a self-service deployment platform for developer-managed releases

DevOps Lead — TV Azteca Digital

Oct 2021 - Jun 2022

- Unified iOS and Android deployment using Fastlane with GitHub Actions for build verification and SonarQube for code quality gates
- Defined the branching strategy and release workflow for all mobile projects
- Built Smartsheet webhook integrations so PMs could trigger deployments via cards — removing the DevOps bottleneck and enabling self-service releases
- Increased mobile release frequency from weekly to daily

DevOps Founder & Developer Lead — Aiontech

Jul 2015 - Oct 2021

- Founded the DevOps practice from zero — introduced Docker, trained the team on containerized environments, and built CI/CD end-to-end with Jenkins, GitHub, SonarQube, and Artifactory
- Defined the branching strategy and release workflow adopted across all projects
- Migrated legacy Java 6/7 to Java 8 Spring Boot, containerized with Docker, deployed to AWS EC2 → ECS
- Delivered platforms for 10+ clients across banking (HSBC, InvestaBank), retail, and government

EDUCATION

Master's in Artificial Intelligence — UNIR – Universidad Internacional de La Rioja | In Progress

B.S. Computer Engineering — IPN – ESIME Culhuacán | 2020

Digital Systems Technician — IPN – CECyT 9 | 2015
